

COMPRESSED AIR • PIPING • EQUIPMENT

Your installation. Our expertise.

Installation, commissioning and support for your pressure installations in Québec.

From installation to documentation

Specialized support with Armserv Contracting.

HOW ARMSERV SUPPORTS YOU

01 Installation & commissioning

Armserv has a Quality Control Program (QCP) and all required RBQ-recognized licences. Its expertise covers complete compressed air systems: piping, filtration, dryers and compressors, including installation and commissioning under pressure in accordance with applicable requirements.

02 Equipment registration

Armserv declares tanks larger than 42.5 litres to the RBQ, so the owner-user receives the pressure vessel approval certificate to keep in the company's pressure equipment register. Armserv also supports the declaration or regularization of existing pressure equipment.

03 Equipment registers & upgrades

Armserv helps create and maintain your pressure equipment register and supports equipment and piping upgrades to meet applicable RBQ requirements.

UNDERSTANDING THE RBQ

The Régie du bâtiment du Québec regulates construction and pressure installations to protect the public and workers. Its role includes compliance inspections at owner-user facilities, registering pressure equipment approvals and inspecting recognized installers' Quality Control Programs.

Your role as an owner-user

Operate and maintain equipment in accordance with the Building Act, the Regulation respecting pressure installations and applicable codes and laws. Keep approval documents and an up-to-date equipment register available on site for RBQ consultation.
